Diamond Tome - you're skins new best friend

Diamond Tome microdermabrasion resurfacing is a unique deep exfoliation treatment using special diamond chips to polish the top most layer of the skin and remove dead skin cells. Removing this layer of dead skin leaves a smoother, more radiant, youthful complexion and promotes the growth of healthy new skin cells.

The results of Diamond Tome are similar to that of a chemical peel or particle microdermabrasion, but the positive skin benefits are more significant. More importantly, Diamond Tome does not cause bad side effects such as skin irritation and inflammation often caused by loose particles. Unlike other exfoliation treatments, the Diamond Tome skin resurfacing is also environmentally friendly as it uses no loose abrasives that can contaminate you or the environment.
